Class Descriptions

All classes are 4 hours unless otherwise specified.

Attending an Oregon OSHA class helps you gain important knowledge and skills. The certificate should not be considered formal Oregon OSHA certification of professional competencies or qualifications.

Fall Protection

This class will discuss the Oregon OSHA rules for fall protection use in the construction industry and will provide specific tools to build a pro-active safety program. Falls are consistently one of the top ten injuries in Oregon and cost employers millions of dollars each year. The goal of the class is to increase personal knowledge about how to prevent falls.

Hazard Identification and Control

You will learn about the types of workplace hazards; hazard correction; developing an inspection checklist for the walk-around inspection; and writing an effective safety inspection report. This class builds on the introduction in class Safety Meetings and Committees.

Job Hazard Analysis (JHA)

You will learn how to determine which jobs need a JHA; write an effective safe job procedure; and use the JHA to improve safety programs.

Conducting JHAs is required for all companies intending to achieve Safety and Health Achievement Recognition Program (SHARP) certification.

Root Cause Analysis

You will learn about several root cause analysis tools and their application in the Accident Investigation process. A walk-through of an example root cause analysis will be presented.

Safety and the Supervisor

You will learn about costs and benefits of taking corrective action; the five general safety supervision responsibilities outlined in OSHA rules. Through class discussion and group exercises, you learn about leadership that supports safe behaviors and conditions.
