Class Descriptions

All classes are 4 hours unless otherwise specified.

Attending an Oregon OSHA class helps you gain important knowledge and skills. The certificate should not be considered formal Oregon OSHA certification of professional competencies or qualifications.

Accident Investigation

You will learn about why investigations are important; and the process for conducting an accident investigation. This how-to class builds on the basic introduction in class *Safety Meetings and Committees*.

Excavation Safety

You will learn about: the role of the "competent person"; planning considerations; specific hazards resulting from excavation work; requirements for protective systems; and Oregon OSHA's soil-classification methods.

Fall Protection

This class will discuss the Oregon OSHA rules for fall protection use in the construction industry and will provide specific tools to build a pro-active safety program. Falls are consistently one of the top ten injuries in Oregon and cost employers millions of dollars each year. The goal of the class is to increase personal knowledge about how to prevent falls.

Forklift Safety

You will learn about the OSHA rules for Powered Industrial Trucks and developing a forklift training program. This class does not offer forklift operator certification (cards).

Hazard Communication - Aligned with GHS

You will learn how to: write a hazard communication program; complete a chemicals list; conduct employee training; and analyze container labels and Safety Data Sheets (SDS). This how-to workshop guides you through developing and implementing an effective hazard communication program.

Lockout/Tagout

You will learn about the purpose and scope of the lockout/tagout standard; lockout and tagout procedures; training criteria; and periodic inspection criteria.

Machine Safeguarding

You will learn about Oregon OSHA machine guarding requirements; hazardous motions and actions; guards and devices; and training guidelines.

Safety and the Supervisor

You will learn about costs and benefits of taking corrective action; the five general safety supervision responsibilities outlined in OSHA rules. Through class discussion and group exercises, you learn about leadership that supports safe behaviors and conditions.

Safety Meetings and Committees

This introductory class discusses the role and purpose for the safety meeting and/or committee; employer and employee responsibilities; and safety committee training requirements.
