## Website

[OSHA Website](http://www.OSHA.gov)
All classes are 4 hours unless otherwise specified.

Attending an Oregon OSHA class helps you gain important knowledge and skills. The certificate should not be considered formal Oregon OSHA certification of professional competencies or qualifications.

Accident Investigation
You will learn about: why investigations are important and the process for conducting an accident investigation. This how-to class builds on the basic introduction into the role and purpose of Safety Meetings and Committees.

Bloodborne Pathogens
You will learn about: the bloodborne pathogens rule and written exposure control plan. Topics will include basic information about routes of exposure, disease processes, control measures, and training requirements.

Attending an Oregon OSHA workshop or completing an online course helps you gain important knowledge and skills. The certificate should not be considered formal Oregon OSHA certification of professional competencies or qualifications.

Confined Space Safety
You will learn about the definition of a confined space and a permit-required confined space; hazards; alternative procedures to control atmospheric hazards; the written program and entry permit system.

Excavation Safety
You will learn about: the role of the competent person, planning considerations, specific hazards resulting from excavation work, requirements for protective systems, and Oregon OSHA’s soil-classification methods.

Fall Protection
This class will discuss the Oregon OSHA rules for fall protection use in the construction industry and will provide specific tools to build a pro-active safety program. Falls are consistently one of the top ten injuries in Oregon and cost employers millions of dollars each year. The goal of the class is to increase personal knowledge about how to prevent falls.

Forklift Safety
You will learn about the Oregon OSHA rules for Powered Industrial Trucks and developing a forklift training program. This class does not offer forklift operator certification (cards).

Hazard Communication – Aligned with GHS
You will learn how to: write a hazard communication program, complete a chemicals list, conduct employee training, and analyze container labels and Safety Data Sheets (SDS). This how-to workshop guides you through developing and implementing an effective hazard communication program. Provides 3 credits toward recertification of Oregon certified pesticide applicator licenses.

Hazard Identification and Control
You will learn about: the types of workplace hazards, hazard correction, developing an inspection checklist for the walk-around inspection, and writing an effective safety inspection report. This class builds on the hazard identification and hazard control modules that are included in Oregon OSHA’s introductory class Safety Meetings and Committees.

Job Hazard Analysis (JHA)
You will learn how to: determine which jobs need a JHA, write an effective safe job procedure, and use the JHA to improve safety programs. Conducting JHAs is required for all companies intending to achieve Safety and Health Achievement Recognition Program (SHARP) certification.

Lockout/Tagout and Machine Safeguarding
This two-part workshop reviews the requirements in OSHA rules, the Control of Hazardous Energy (Lockout/Tagout), and Machinery and Machine Guarding.

Lockout/Tagout
You will learn about the purpose and scope of the lockout/tagout standard; lockout and tagout procedures; training criteria; and periodic inspection criteria.

Machine Safeguarding
You will learn about Oregon OSHA machine guarding requirements; hazardous motions and actions; guards and devices; and training guidelines.

OSHA 300 Recordkeeping
You will learn about: reporting requirements, how to fill out the OSHA forms, determine if an injury or illness should be recorded, evaluate the form, and recognize injury trends and root causes.

Root Cause Analysis
You will learn about several root cause analysis tools and their application in the accident investigation process. A walk-through of an example root cause analysis will be presented.

Safety and the Supervisor
You will learn about: costs and benefits of taking corrective action, and the five general safety supervision responsibilities outlined in the Oregon OSHA rules. Through class discussion and group exercises, you learn about leadership that supports safe behaviors and conditions.

Safety Leadership
You will learn about the concept of leadership, leadership styles, applying effective recognition and discipline, developing trust and credibility. Emphasis is on applying leadership to reduce or eliminate safety hazards. This workshop benefits members of the safety committee.

Safety Meetings and Committees
This introductory class discusses the role and purpose for the safety meeting and/or committee; employer and employee responsibilities; and safety committee training requirements.

What to Expect from an Oregon OSHA Inspection
You will learn about: Oregon OSHA services, employee/employer and compliance officer rights and responsibilities, and how and why inspections are conducted. This class helps take the mystery out of the Oregon OSHA compliance inspection process.

Worker Protection Standard
You will learn about: the worker protection standard; effective training and information for pesticide handlers and workers. The WPS applies to people who work on farms, in forests, nurseries, greenhouses, or other locations that use pesticides.
