Excavation Safety
You will learn about: the role of the “competent person”; planning considerations; specific hazards resulting from excavation work; requirements for protective systems; and Oregon OSHA’s soil-classification methods.

Fall Protection
This class will discuss the Oregon OSHA rules for fall protection use in the construction industry and will provide specific tools to build a pro-active safety program. Falls are consistently one of the top ten injuries in Oregon and cost employers millions of dollars each year. The goal of the class is to increase personal knowledge about how to prevent falls.

Forklift Safety
You will learn about the OSHA rules for Powered Industrial Trucks and developing a forklift training program. This class does not offer forklift operator certification (cards).

Hazard Communication – Aligned with GHS
You will learn how to: write a hazard communication program; complete a chemicals list; conduct employee training; and analyze container labels and Safety Data Sheets (SDS). This how-to workshop guides you through developing and implementing an effective hazard communication program.

Hazard Identification and Control
You will learn about the types of workplace hazards; hazard correction; developing an inspection checklist for the walk-around inspection; and writing an effective safety inspection report. This class builds on the introduction in class Safety Meetings and Committees.

Job Hazard Analysis (JHA)
You will learn how to determine which jobs need a JHA; write an effective safe job procedure; and use the JHA to improve safety programs. Conducting JHAs is required for all companies intending to achieve Safety and Health Achievement Recognition Program (SHARP) certification.

Lockout/Tagout and Machine Safeguarding
This two-part workshop reviews the requirements in OSHA rules, the Control of Hazardous Energy (Lockout/Tagout), and Machinery and Machine Guarding.

Lockout/Tagout
You will learn about the purpose and scope of the lockout/tagout standard; lockout and tagout procedures; training criteria; and periodic inspection criteria.

Machine Safeguarding
You will learn about Oregon OSHA machine guarding requirements; hazardous motions and actions; guards and devices; and training guidelines.

Safety and Health Management Principles
You will learn why a safety and health management system is important; become familiar with the 7 core elements of an effective safety and health management program; and learn about best practices and overcoming obstacles.

Worker Protection Standard
You will learn about: the worker protection standard; effective training and information for pesticide handlers and workers.
Registration Form

Name: ________________________________________________________________

Company: _____________________________________________________________

Mailing Address: __________________________________________________________________________________________

City: __________________________________________________________________________ State: __________ Zip: ____________________________

Phone: __________________________________________________________________________ Fax: _______________________________________________________________________

E-mail Address: _____________________________________________________________________________________________

What does your business do? ________________________________________________________________________________

Is your business or organization Native American/tribally owned: Yes _____ No _____

My business or organization has (statewide):

  • fewer than 20 employees _____  • 21-50 employees _____  • more than 50 employees _____

Contact me with more information about free on-site consultations (a confidential service from Oregon OSHA): Yes_____ No _____
