

COVID-19 Infection Control Plan

Oregon OSHA's temporary rule for COVID-19 (OAR 437-001-0744) requires all employers to develop and implement an infection control plan. This plan builds upon each employer's exposure risk assessment, which the rule also requires, and aims to eliminate or otherwise minimize worker exposure to COVID-19. The specific requirements for this COVID-19 infection control plan are outlined under subsection 437-001-0744(3)(h). This plan does not include the additional elements required for exceptional risk workplaces.

Business/Employer Name

Date

All job assignments or worker tasks requiring the use of personal protective equipment (including respirators) necessary to minimize employee exposure to COVID-19.

The procedures we will use to ensure that there is an adequate supply of masks, face coverings, or face shields and personal protective equipment (including respirators) necessary to minimize employee exposure to COVID-19.

COVID-19 Infection Control Plan

The specific hazard control measures that we installed, implemented, or developed to minimize employee exposure to COVID-19, listed and described.

Description of our COVID-19 mask, face covering, and face shield requirements at the workplace, and the method of informing individuals entering the workplace where such source control is required.

COVID-19 Infection Control Plan

The procedures we will use to communicate with our employees and, other employers in multi-employer worksites, regarding an employee's exposure to an individual known or suspected to be infected with COVID-19 to whom other workers may have been exposed. This includes the communication to individuals identified through COVID-19 contact tracing and general communication to the workplace at large.

The procedures we will use to provide our workers with the initial employee information and training required by 437-001-0744.
