Oregon OSHA – Adopted federal OSHA amendments:  
Occupational Exposure to Beryllium  
in General Industry,  
Construction, and Maritime.

On January 9, 2017, federal OSHA adopted final rules for beryllium for general industry, construction, and maritime. Before these rules, the only specific rule for beryllium was an airborne permissible exposure limit (PEL) of 2 micrograms per cubic meter of air ( $\mu\text{g}/\text{m}^3$ ). With the adoption of these rules, federal OSHA lowered the PEL from 2  $\mu\text{g}/\text{m}^3$  to 0.2  $\mu\text{g}/\text{m}^3$ , and instituted an action level of 0.1  $\mu\text{g}/\text{m}^3$ . These rules require an exposure assessment, with periodic monitoring under certain circumstances, requires engineering and work practice controls to reduce exposure levels, institutes a written exposure control plan, requires provisions for regulating employee access to certain areas, respiratory protection, medical surveillance, and employee training and information.

Oregon OSHA combined the requirements of the general industry and construction rules into one set of rules applicable to both industries, as new Oregon-initiated rules OAR 437-002-2024 through 437-002-2026, 437-002-2028 through 437-002-2030, 437-002-2032 through 437-002-2038, 437-002-2040, and 437-002-2045.

Oregon OSHA also updated the air contaminants rules for general industry and construction, OAR 437-002-0382 and 437-003-1000, to reflect the new beryllium rules.

Two public hearings were held during June of 2017. Oregon OSHA did not receive any comments at these hearings. We received one written comment in support of this rulemaking.

**This is Oregon OSHA Administrative Order 3-2017, adopted July 7, 2017 and effective March 12, 2018.**

Note: OAR 437-002-2025, Definitions, was re-filed on July 31, 2017 in order to correct an error in our definition of Permissible Exposure Limit (PEL) within this specific rule. Originally, this rule was filed with an incorrect definition of PEL as being 0.1  $\mu\text{g}/\text{m}^3$ . This was corrected to the accurate PEL of 0.2  $\mu\text{g}/\text{m}^3$ . This re-filing did not effect any other rules and did not change the effective dates of these rules.

**This is Oregon OSHA Administrative Order 4-2017, adopted July 31, 2017 and effective March 12, 2018.**

Oregon OSHA combined the requirements of the general industry and construction rules into one set of rules applicable to both industries, as new Oregon-initiated rules OAR 437-002-2024 through 437-002-2038.

Oregon OSHA also updated the air contaminants rules for general industry and construction, OAR 437-002-0382 and 437-003-1000, to reflect the new beryllium rules.

This filing is a refile due to a filing error. In OAR 437-002-2025, Definitions, we incorrectly stated the definition of the Permissible Exposure Limit was 0.1  $\mu\text{g}/\text{m}^3$ . We changed this to the correct definition of 0.2  $\mu\text{g}/\text{m}^3$ .
