PROGRAM DIRECTIVE

Program Directive: A-160
Issued: April 15, 1991
Revised: October 10, 2012

SUBJECT: Hazardous Waste Operations and Emergency Response:
Post-Emergency Response Operations

AFFECTED STANDARDS/DIRECTIVES:
OSHA Instruction CPL 02-02-051, Inspection Guidelines for
Post-Emergency Response Operations Under CFR 1910.120,
Division 2/E, OAR 437-002-0042 Emergency Action Plans
Division 2/H, 1910.120 Hazardous Waste Operations and
Emergency Response
Division 2/Z, 1910.1200 Hazard Communication
Division 2/I, Personal Protective Equipment
Division 2/Z, Toxic and Hazardous Substances
Oregon OSHA’s Field Inspection Reference Manual (FIRM)

PURPOSE: This instruction provides procedures for ensuring uniform
application of training requirements under the Hazardous Waste
Operations and Emergency Response standard for employees
involved in post-emergency response operations.

BACKGROUND: A final standard for Hazardous Waste Operations and Emergency
Response (1910.120) became effective March 6, 1990. In
addition to many other requirements, the standard regulates worker
safety and health during post-emergency response operations.

A. The standard defines post-emergency response as “that
portion of an emergency response performed after the
immediate threat of a release has been stabilized or
eliminated and clean-up of the site has begun. If post
emergency response is performed by an employer's own
employees who were part of the initial emergency
response, it is considered to be part of the initial response
and not post-emergency response. However, if a group of
an employer's own employees, separate from the group providing initial response, performs the clean-up operation, then the separate group of employees would be considered to be performing post-emergency response and subject to paragraph (q)(1 1) of this section”.

B. The employer conducting the clean-up must comply with all the requirements in (b)-(o) of the standard (1910.120 (q)(1 1)(i)) unless the clean-up is done on plant property using plant or workplace employees. The requirements under (b)-(o) of the standard specify a minimum of 24 hours of off-site training. If the cleanup is done on plant property using plant or workplace employees, the employer must comply with the training requirements of OAR 437-002-0042, 1910.134, 1910.1200, and other appropriate training made necessary by the tasks they are expected to perform (1910.1 20(q)(1 1)(ii)).

C. Based on experience with the standard during oil spills off the coasts of Texas, Alaska, and California, the hazards to employees vary widely in severity of potential injury or illness. For job duties and responsibilities with a low magnitude of risk, fewer than 24 hours of training may be appropriate for these post-emergency clean-up workers. It is our expectation that though the number of hours of training may vary, a minimum of 4 hours would be appropriate in most situations. Moreover, petroleum spills are unique in that many people who assist in the clean-up operations may not engage in this activity on a recurring basis. In addition, for maximum protection of the environment, petroleum spills dictate clean-up must be completed as soon as possible.

D. The U.S. Coast Guard and other concerned parties have requested flexibility for the amount of employee training required for petroleum spill clean-ups and other types of clean-up operations which follow emergency situations.

E. The person with responsibility for making assessments when fewer than 24 hours of training is required is the Manager of Enforcement.

**ACTION:**

A. If an employer complies with the clear intent of a standard but deviates from its particular requirements in a manner that has no direct or immediate relationship to employee safety or health, Oregon OSHA's FIRM directs that such a violation be characterized as minimal. Citations are not issued for minimal violations.
B. Compliance with the intent of the training requirements of 1910.120(q) (11) (i) is achieved when an employer provides sufficient training as outlined below, but the exact specifications of OSHA standards are not met (i.e., the specific number of hours required by the standard is not given). In such cases, a minimal violation exists and no citation will be issued. Violations of 1910.120(q) (11) (i) can be abated by compliance with the criteria below. All of the following criteria must be met in order to classify violations of the training requirements of 1910.120(q) (11) (i) as minimal:

1. Clean-up is performed in an area that has been monitored and fully characterized by a qualified person indicating that exposures are presently and can be expected to remain under permissible exposure limits and other published exposure limits;

2. Health risks from skin absorption are minimal;

3. Employees have completed the training requirements of OAR 437-002-0042 and 1910.1200, including refresher training as appropriate;

4. Employees have completed other safety and health training made necessary by the tasks they are expected to perform such as, but not limited to, operating procedures, decontamination procedures, water safety, hypothermia, heat stress, and safety hazard controls;

5. There is adequate on-site supervision by employees who meet the training requirements of 1910.1 20(e)(4).

This directive will be followed whenever inspections are conducted on post-emergency response operations for crude or bunker oil spills on water in the jurisdiction of Oregon OSHA.

EFFECTIVE DATE This program directive is effective immediately and will remain in effect until cancelled or superseded.
